BRANCH ROLLOUTS. NATIONAL REACH. PERSONAL ACCOUNTABILITY.

A focused partner for your *financial services locations.*

3D coordinates technology infrastructure, communications, physical security, and ongoing support for banks, credit unions, insurance organizations, and related financial services firms.

Connected capabilities

Infrastructure	Structured copper and fiber cabling, network infrastructure, labeling, and organized technology spaces.
Communications	VoIP, business telephony, voice and data, and collaboration systems.
Physical security	Video surveillance, access control, and intrusion detection scoped to the operating environment.
Deployment & support	Branch openings, office relocations, refresh programs, coordinated installation, handover, and ongoing service.

National coordination

Teams in major cities in every state, coordinated from Idaho and California. James Goodrich, General Manager Idaho, and Allan Goodson, General Manager California, jointly lead nationwide operations with more than 100 years of combined industry experience.

Confidentiality by agreement

We enter into an NDA with every customer. Confidential information is protected in accordance with the agreement and applicable law. Customer identities, site photographs, and project details are not published without prior written authorization.

EVALUATE A FIRST ENGAGEMENT

Start with one location.
Let the work introduce 3D.

Bring us a branch opening, office refresh, or defined system upgrade. Agree on the work and how it will be evaluated before deciding whether a wider program is the right next step.

01

Define the location and scope.

Identify systems, general geography, site readiness, operating restrictions, internal contacts, and target timing.

02

Agree on delivery and acceptance.

Establish commercial terms, responsibilities, work windows, testing, reporting, documentation, and handover criteria.

03

Review the completed engagement.

Evaluate communication, workmanship, documentation, and the agreed deliverables. Discuss future work based on that review.

Supporting documentation for your proposed work

Ask our team to review the requirements that apply to your locations and systems:

- Applicable licensing and insurance documentation
- Technician qualifications, field coverage, and program capacity
- Reporting, closeout records, service expectations, and escalation
- Relevant experience discussed privately, subject to permission and confidentiality

The profile summarizes company capabilities. Supporting documents, location-specific qualifications, coverage, commercial terms, and service commitments are reviewed for the proposed engagement.
